

Add Users to Microsoft Server 2011

1. Open the **console**.
2. Go to **Users and Group** and select **Add a new user account**.

3. Fill the information as required and leave the role as **Standard User**.

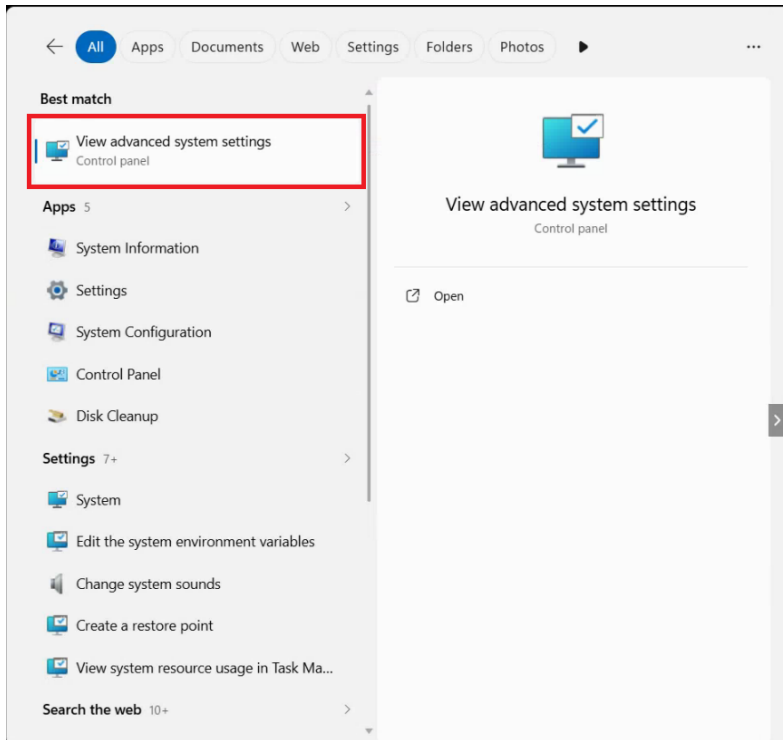

The 'Add a New User Account' dialog box is shown. It has a title bar with the text 'Add a New User Account'. The main content area is titled 'Add a new user account and assign a user role'. On the left, there is a small icon of a person with a green plus sign. The form contains the following fields:

- First name: [text box]
- Last name: [text box]
- User name: [text box with a dropdown arrow]
- E-mail address: [text box] @ [text box]
- Description: [text box]
- Phone number: [text box]

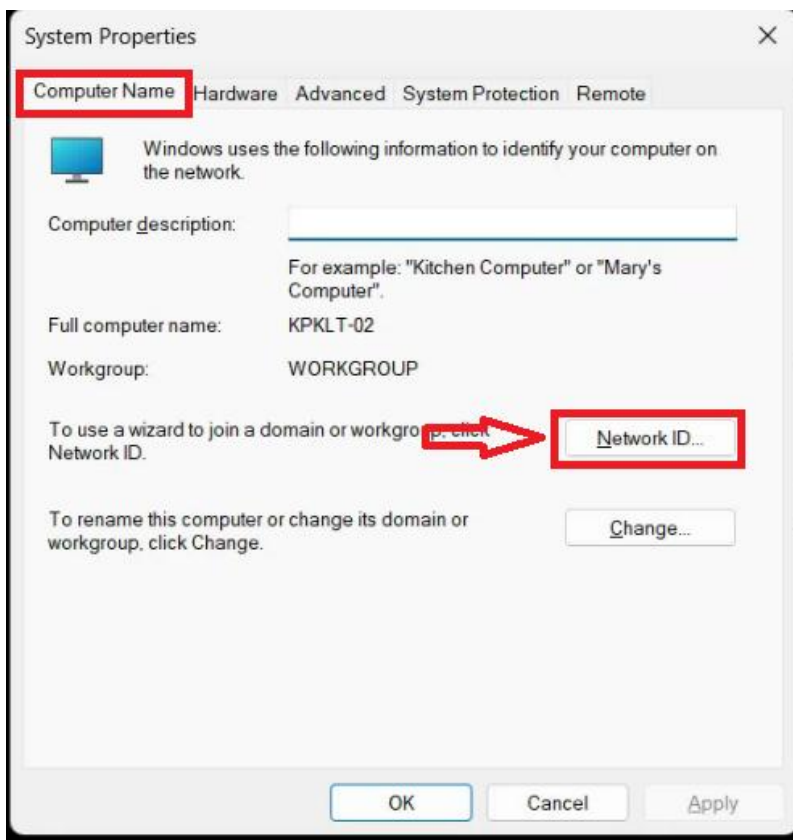

Below these fields, there is a section titled 'Choose a user role' with a dropdown menu. The dropdown is currently set to 'Standard User'. Below the dropdown, there is a link that says 'What user role should I choose for this user?'. At the bottom right of the dialog, there is a 'Next' button and a 'Cancel' button.

Add User through Local AD

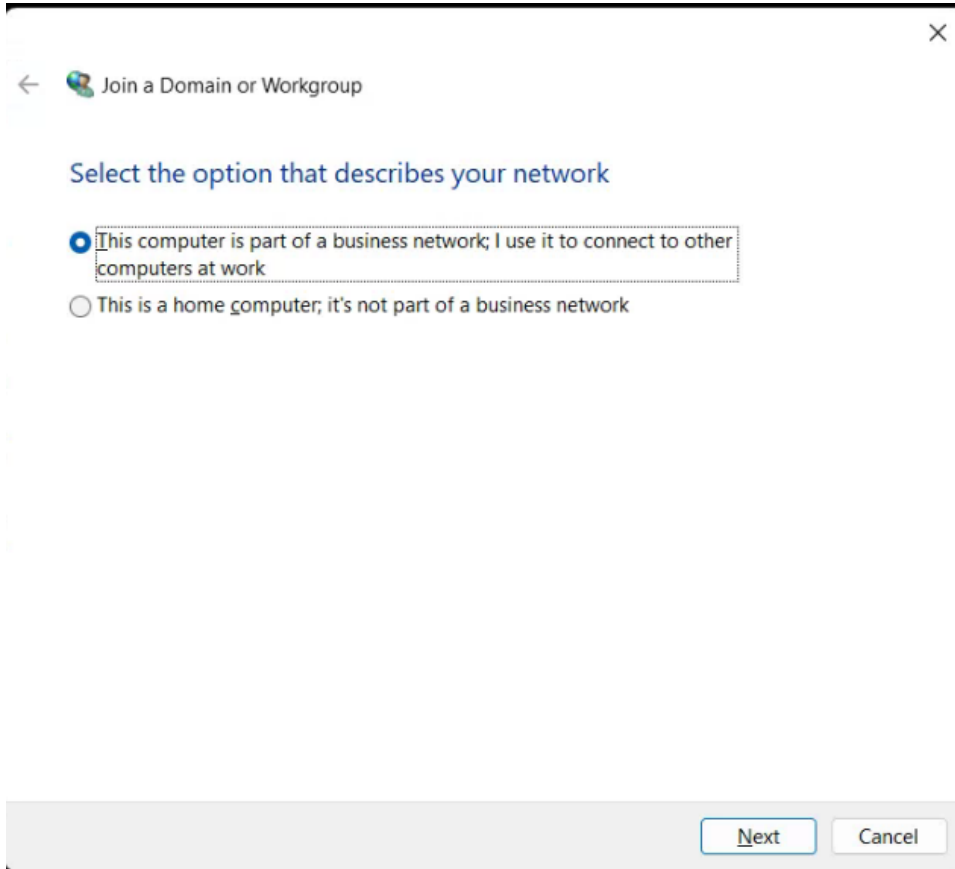

1. Select **Windows** and search and select **View advanced system settings**.

2. Select **Computer name** > **Network ID**.

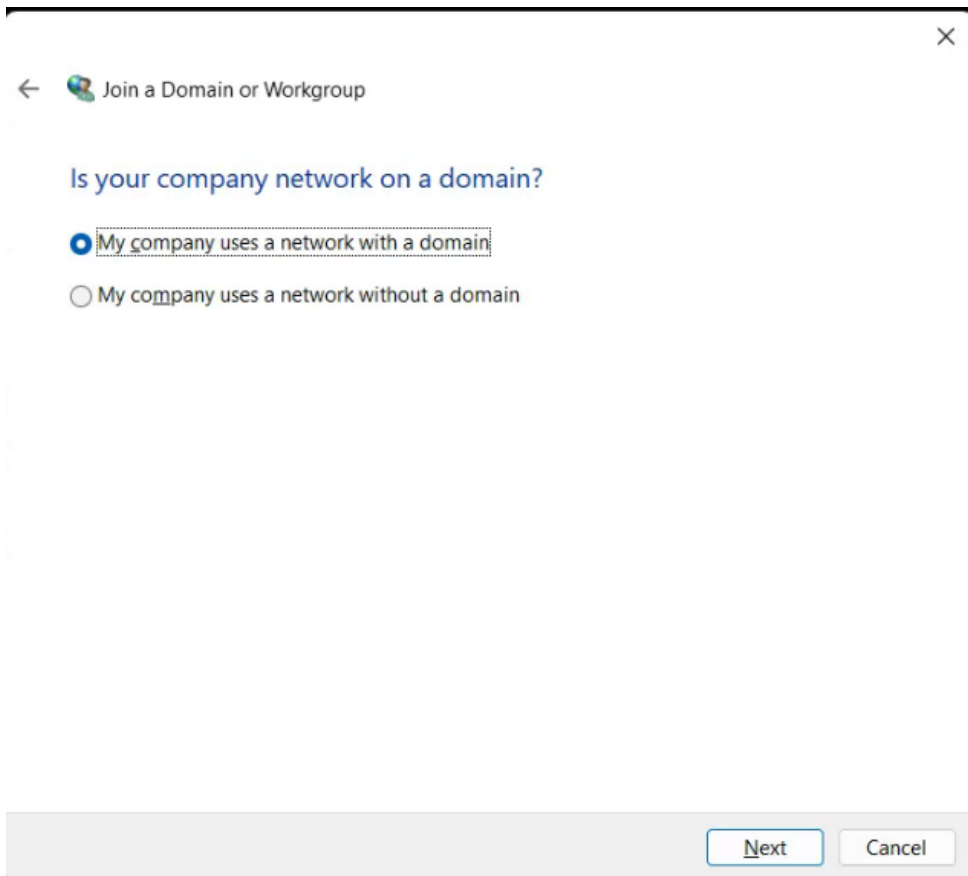

3. Select the first option and hit **next**.

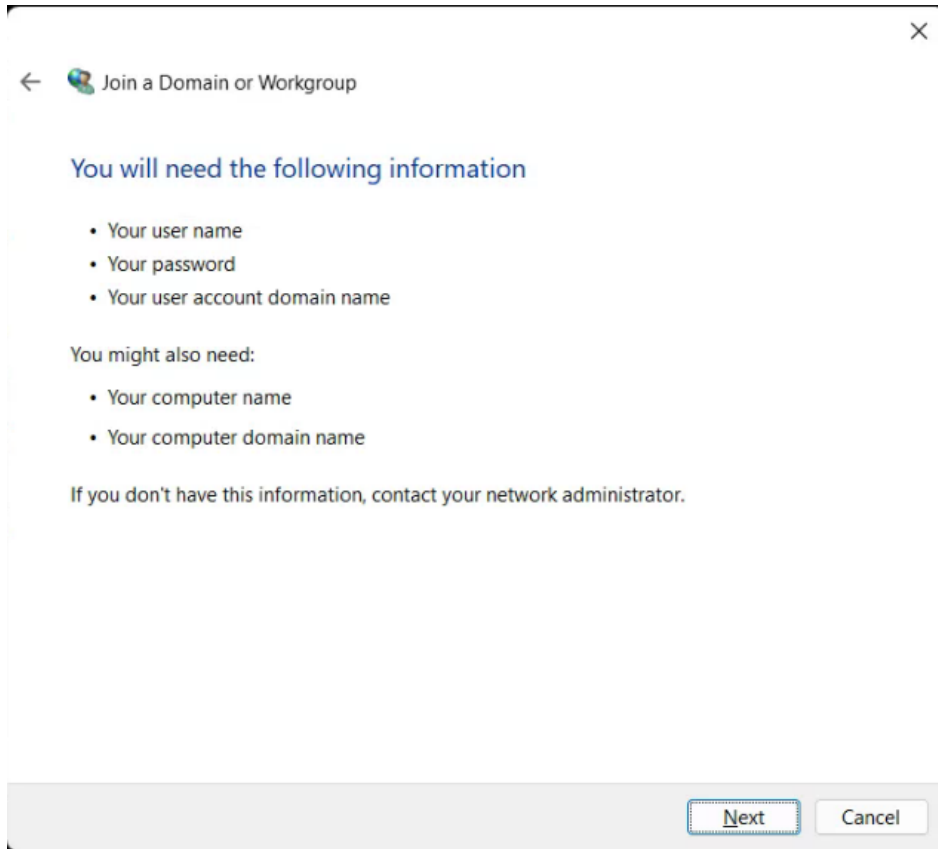

A screenshot of a Windows dialog box titled "Join a Domain or Workgroup". The dialog has a back arrow and a close button (X) in the top-left corner. The main text asks "Select the option that describes your network". There are two radio button options: the first is selected and reads "This computer is part of a business network; I use it to connect to other computers at work", and the second is unselected and reads "This is a home computer; it's not part of a business network". At the bottom right, there are "Next" and "Cancel" buttons.

4. Select the first option and hit **next**.

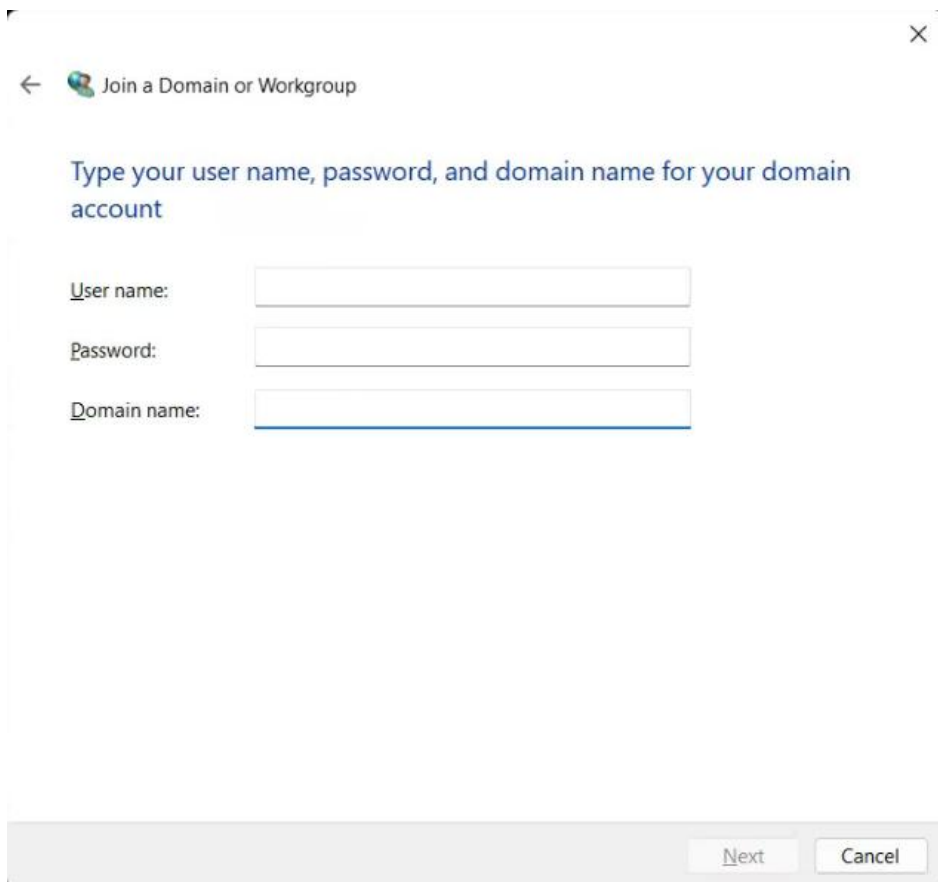

A screenshot of a Windows dialog box titled "Join a Domain or Workgroup". The dialog has a back arrow and a close button (X) in the top-left corner. The main text asks "Is your company network on a domain?". There are two radio button options: the first is selected and reads "My company uses a network with a domain", and the second is unselected and reads "My company uses a network without a domain". At the bottom right, there are "Next" and "Cancel" buttons.

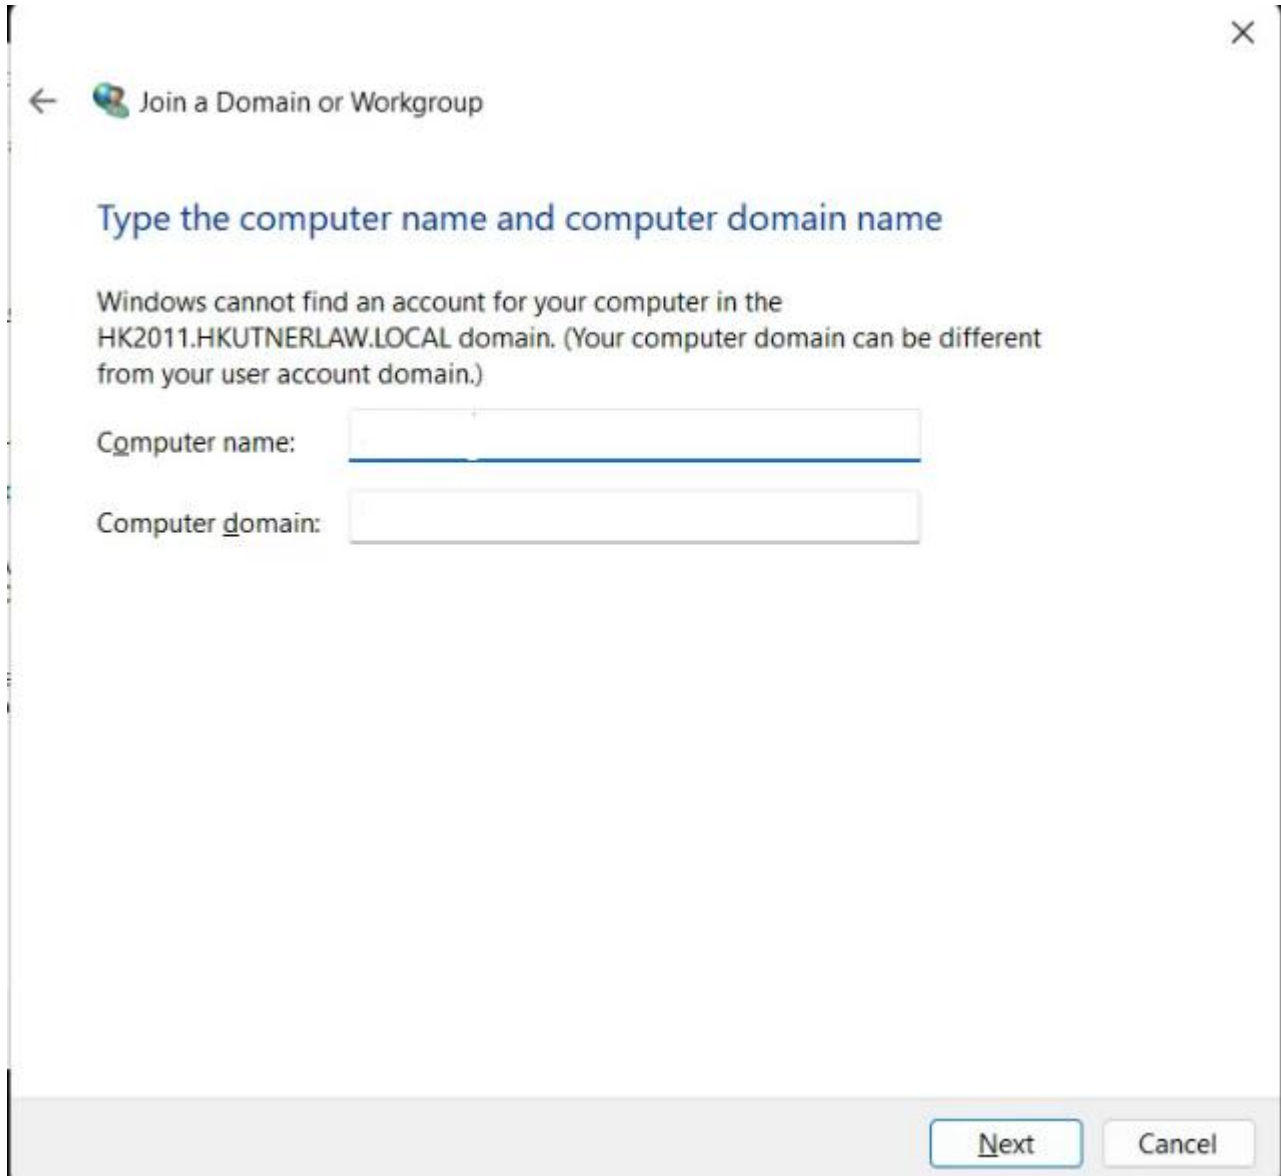

5. Select **next**.

6. Type the account credentials from the **Local AD** and the **Domain Name** then select **Next**.

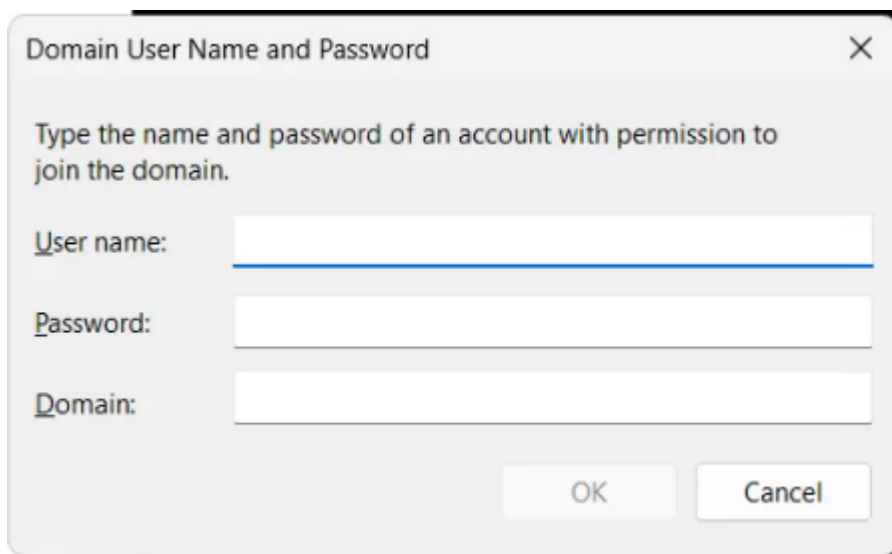

7. Select **Next**.

The screenshot shows the 'Join a Domain or Workgroup' dialog box in Windows. At the top, there is a back arrow and a globe icon. The title is 'Join a Domain or Workgroup'. Below the title, it says 'Type the computer name and computer domain name'. A message states: 'Windows cannot find an account for your computer in the HK2011.HKUTNERLAW.LOCAL domain. (Your computer domain can be different from your user account domain.)'. There are two input fields: 'Computer name:' and 'Computer domain:'. At the bottom right, there are 'Next' and 'Cancel' buttons.

8. Enter the **Username**, **Password of the local AD account** and **Domain name**.

The screenshot shows the 'Domain User Name and Password' dialog box. It has a title bar with a close button. The text inside says 'Type the name and password of an account with permission to join the domain.' There are three input fields: 'User name:', 'Password:', and 'Domain:'. At the bottom, there are 'OK' and 'Cancel' buttons.

9. Select **Ok**.
10. Restart the computer.
11. The login will now appear on Windows.
