

VoIP and TV Troubleshooting Guide VPN

Description: User upgraded Rogers from XB6 to XB7 and VoIP and TV stopped working.

Causes:

1. Modem has been changed.

Key Points:

1. Rogers IP is **Dynamic**.
2. Rogers **Ethernet Port (Redline)** must be connected to the **Firewall WAN1**.
3. **Firewall LAN1** must be connected to the **SWITCH**.
4. **Asus Router** must be connected to the **SWITCH**.
5. **Home** will NOT work if the IP is different from the **Office**.
6. **Firewall** will not work unless **Bridged Mode is ON** from Rogers Modem.
7. **Rogers IP Information** can be obtained through the **Xfinity App**.

Goal:

1. Home and Office IP's must be configured where both can communicate.

IP References

Rogers IP Information (Reference)

Subnet - 255.255.255.0

Router/Gateway - 10.0.0.1

DNS1 - <DNS_SERVER_1>

DNS2 - <DNS_SERVER_2>

DHCP Range - 10.0.0.2-253

WAN IPv4 – <PUBLIC_IP>

Home IP Equipment Information

Unifi USG Pro 4

IP Address - 192.168.2.1

WAN1 – <PUBLIC_IP>

Office IP Equipment Information

Unifi UXG Pro

IP Address - 192.168.1.1

WAN1 – <PUBLIC_IP>

WAN2 – <PUBLIC_IP>

USW 24 G1

IP Address - 192.168.2.1

Troubleshooting Steps

1. Ping 192.168.1.1 using CMD.
2. Go to settings on laptop, Wi-Fi and connection, and manually setup DHCP.
3. Try pinging 192.168.1.1 again.

If nothing else worked, do a factory reset on the Firewall.

1. Change the old IP to the new one in Unifi.
2. Send an adoption request to the office for approval after the factory reset from the Firewall.
3. Check the Ethernet cables to see if it's connected to the right ports on the Firewall, Switch, Asus Router and Rogers Modem.
4. Wait for the Status to go online in Unifi.
5. Check for adoption request in Unifi.
